

MULTIFUNCTION INFRARED CAMERA DETECTOR

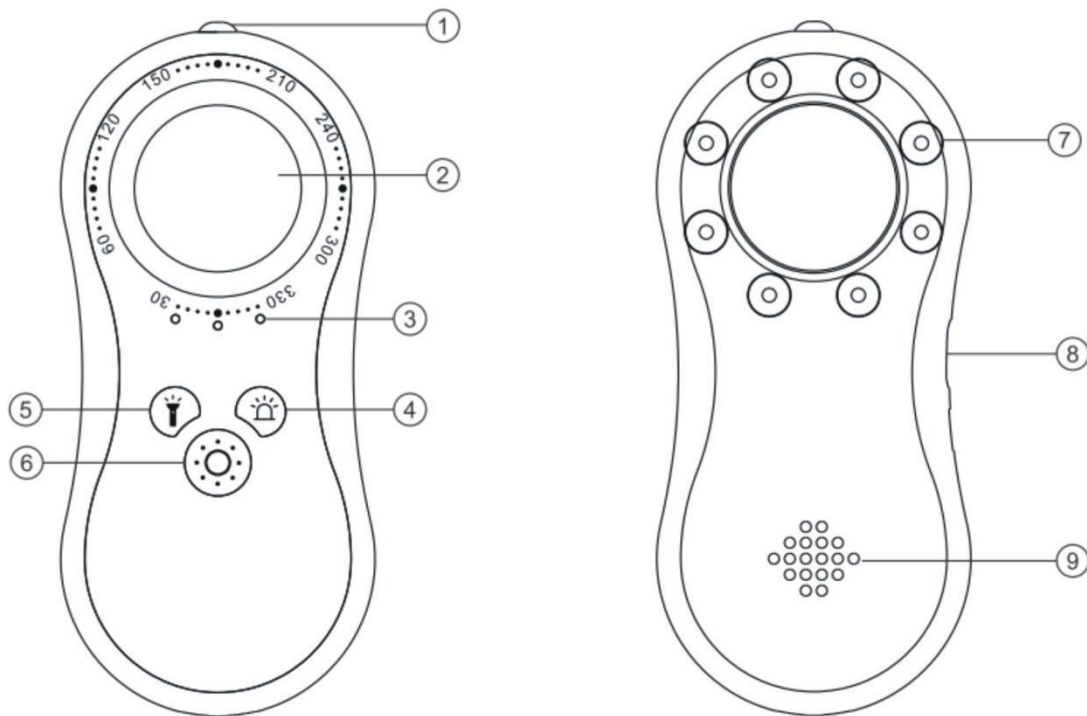

1 . Please read and keep this instruction carefully before using this product

2 .Product Features

This product adopts professional infrared scanning detection technology, can accurately find the hidden location of other stealth-shooting equipment such as pinhole camera, can effectively prevent and protect privacy invasion.

This detector adopts high-sensitivity displacement sensor technology and high-precision algorithm chip, which can accurately detect the displacement condition of the detector and the attached object, and emit sound and light alarm. Therefore, it can protect the luggage safety of travelers and personal safety and privacy of the hotel staying during traveling.

3 .Product Structure

1. LED Torch Light
2. Infrared View-finder
3. Key switch Indicator
4. Displacement Alarm Key switch

5. Key switch of Torch Light
6. Key switch of Infrared Scanning
7. Infrared Detection LED
8. USB Power Charge
9. Alarm Buzzer

4 .Operating Instruction

4.1 Camera Detection:

Long press  key for 3 seconds boot, the Infrared detection LEDs start flashing, use one eye look through the View-finder, searching for hidden cameras.

if found in visual range have a flashing red dot or more, the red point, is a hidden candid camera, press again the Scanning key, infrared scanning LEDs blink faster, the suspicious red dot will be more obvious. Press the Key once again infrared scanning LEDs stop working, system under stand-by mode.

4.2 LED Torch Light:

Under standby mode, press  key to on the Torch light, press again to off the torch light.

4.3 Displacement Alarm

Under standby mode, press  key, Detector into the state of burglar alarm, as long as the detector has movement or vibration phenomenon, detector will beep! Di! Alarm, infrared scanning LEDs will keep flashing. Press again this key, sound and LED alarm stop and alarm functions relieved, press again the key to activate the alarm function. Each time the duration of the audible and visual alarm is 1 minute. So as long as detectors on the baggage or the door, then activate the displacement alarm function, can have very good anti-theft alarm function.

4.4 Power off

Long press this  key in the power-on state to turn off the detector. In the power-on state, if there is no any operation the detector will shut down automatically after 5 minutes, and enter the sleep mode to save battery power.

5 .Usage scenario

Scan cameras while staying in hotels or on camping trips. Avoid being filmed improperly.

In airports, stations, restaurants and other occasions, put the detector on luggage and other items, turn on the displacement alarm function, to prevent items lost and stolen.

When staying in a hotel, put the detector on the door and turn on the displacement alarm function to prevent the improper personnel from breaking in and causing property loss and personal injury.

6 .Product specification

Dimension: 84x39x15.2mm

Charging time : 2 hours

Battery Capacity: 200mA

Current : 220mA (Max)

Standby mode : low power 2uA

Casing material : ABS
